

Figure 1: Favorability Score for Clinical Trials – diabetes mellitus, type 2

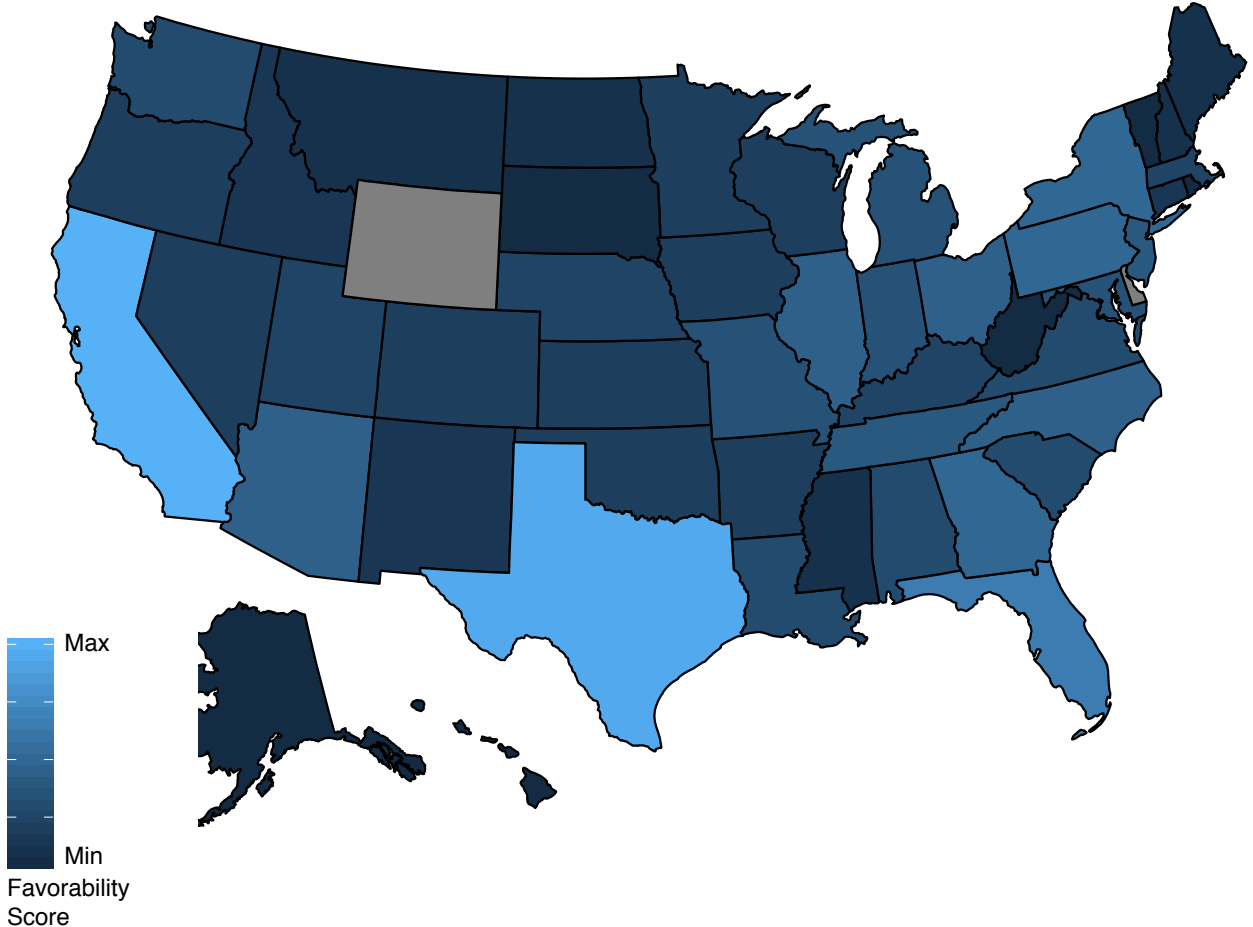

Figure 1 Example visual interface of state favorability scores for diabetes mellitus, type2. The scores represent the number of trials per state/total number of trials in the US and the number of disease affected individuals by state /total number of people expected to have the disease nationwide. These two values were normalized and averaged together to calculate the favorability score. by state. The lighter the color, the higher the favorability score (source data : <https://CDC.gov/datastatistics/> and <http://clinicaltrials.gov/>)
